Bug & Issue Report

Cynbit Website Quality Audit - QA Testing Intern Assessment

1. Summary of Defects

ID	Title	Category	Severity	Priority
BUG-001	DOB field in job application form accepts future dates	Functional / Validation	Medium	P2
BUG-002	Filter buttons (All Success Stories, Software Dev, Cloud Strategy, Digital Marketing) do not work	Functional	High	P1
BUG-003	Stray red dot rendered below the hero mockup card	UI / Visual	Low	P4
BUG-004	Metric labels (UPTIME, GROWTH) use extremely small text	Accessibility / Usability	Low	P3
BUG-005	Low-contrast decorative icon and filter pill backgrounds	Accessibility / UI	Low	P3

2. Test Environment

Device / OS	Laptop, Windows 11
Browser / version	Google Chrome (latest stable)
Viewport	1920 x 1080 (desktop)
Network	Wi-Fi

BUG-001: Date of Birth field accepts future dates

Bug ID	BUG-001
Title	Date of Birth field in the job application form accepts future dates
Module / Page	Careers - Job Application form Site: https://www.cynbit.in/
Category	Functional / Input Validation
Severity	Medium
Priority	P2
Status	New
Reported by	Kavya S M
Date reported	31 Oct 2026

Steps to Reproduce

1. Open https://www.cynbit.in/, go to the Careers section and select any open role to reach the application form.
2. Fill in the mandatory fields (name, email, phone, etc.) with valid data.
3. In the Date of Birth field, enter a future date, 31/12/2030.
4. Observe the field, then click Submit / Apply.

Expected Result

The field should reject any date later than today and show a clear inline error such as "Date of birth cannot be in the future". Submission should be blocked until a valid date is entered. The date picker should also disable future dates.

Actual Result

The Date of Birth field accepts the future date 31/12/2030 and no validation error or warning message is displayed. The invalid value is treated as valid input by the form.

Impact

• Invalid and unrealistic data may be stored in the applicant database.
• The recruiter's age-eligibility screening becomes unreliable.
• Suggests other date fields may lack validation, affecting data integrity.

Suggested Fix

• Add client-side validation (the **max** attribute on the date input, or disable future dates in the date picker).
• Enforce the same check server-side.
• Show a clear inline error message.
• Consider a minimum-age check (18+) if the job requires it.

Evidence

BUG-002: Filter buttons do not work

Bug ID	BUG-002
Title	Filter buttons (All Success Stories, Software Dev, Cloud Strategy, Digital Marketing) do not work
Module / Page	Success Stories page - hero section ('Scalable Solutions'), filter bar Site: https://www.cynbit.in/
Category	Functional
Severity	High
Priority	P1
Status	New
Reported by	Kavya S M
Date reported	31 Oct 2026

Preconditions

User is on the Success Stories page and the filter bar below the hero text is visible.

Steps to Reproduce

1. Open https://www.cynbit.in/ and navigate to the Success Stories page.
2. Scroll to the filter bar below the line "Explore our library of technical precision and human-centric design."
3. Click the SOFTWARE DEV button.
4. Repeat for CLOUD STRATEGY, DIGITAL MARKETING, and then click ALL SUCCESS STORIES.

Expected Result

Clicking a filter button should highlight it as the active filter and update the list of success stories to show only the matching category. ALL SUCCESS STORIES should reset the list to show every story.

Actual Result

Clicking the filter buttons has no effect. The success stories list does not change, and the selected button does not become active. The ALL SUCCESS STORIES button stays highlighted regardless of which button is clicked.

Impact

• Core navigation feature of the page is non-functional, so users cannot browse case studies by service.
• Prospective clients cannot find relevant proof of work, which hurts lead conversion.
• The buttons look clickable but do nothing, which damages trust in the site's quality.

Suggested Fix

• Check the browser console for JavaScript errors and verify that click handlers are attached to the filter buttons.
• Verify that each story card carries a category attribute that matches its filter.
• Update the active-state styling when a filter is selected, and add an empty-state message for categories with no stories.
• Add an automated UI test (Selenium/Playwright) covering each filter option.

Evidence

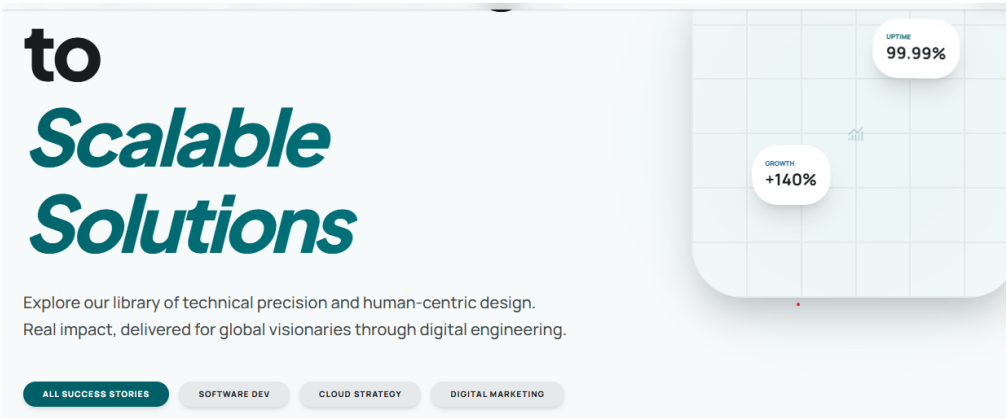

Figure 1: Hero section with filter bar (ALL SUCCESS STORIES, SOFTWARE DEV, CLOUD STRATEGY, DIGITAL MARKETING).

Figure 2: Zoomed view of the filter buttons.

BUG-003: Stray red dot below the hero mockup

Bug ID	BUG-003
Title	Stray red dot rendered below the hero mockup card
Module / Page	Success Stories page - hero section, right-side mockup
Category	UI / Visual
Severity	Low
Priority	P4
Status	New
Reported by	Kavya S M
Date reported	31 Oct 2026

Steps to Reproduce

1. Open the Success Stories page on desktop.
2. Look at the bottom edge of the rounded mockup card on the right side of the hero section.

Expected Result

The area beneath the mockup card should be clean, containing only the intended shadow and background.

Actual Result

A small solid red dot appears just below the bottom edge of the mockup card. It has no label or purpose and looks like a leftover element, debug marker or rendering artifact.

Impact

• Looks unpolished and unprofessional on the first screen visitors see.
• May indicate leftover debug or placeholder code in production.

Suggested Fix

• Inspect the element in DevTools and remove the stray element or styling.
• Review hero components for leftover debug markers before release.

Evidence

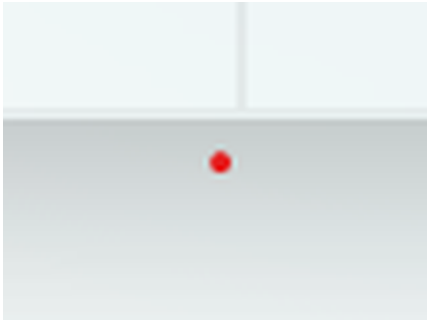

Figure 3: Zoomed view of the red dot below the card.

BUG-004: Metric labels use extremely small text

Bug ID	BUG-004
Title	Metric labels (UPTIME, GROWTH) use extremely small text
Module / Page	Success Stories page - hero section, floating metric cards
Category	Accessibility / Usability
Severity	Low
Priority	P3
Status	New
Reported by	Kavya S M
Date reported	31 Oct 2026

Steps to Reproduce

1. Open the Success Stories page on desktop at 100% zoom.
2. Look at the floating cards labelled UPTIME (99.99%) and GROWTH (+140%).

Expected Result

Labels should be readable at normal zoom (body text of at least 12px recommended).

Actual Result

The UPTIME and GROWTH labels are rendered at a very small size (roughly 8-9px) in a blue shade, while the values below are large. The labels are hard to read, especially for users with low vision.

Impact

• Key context for the statistics is hard to read.
• Does not meet recommended readability guidelines (WCAG 1.4.4, resize text).

Suggested Fix

• Increase label font size to at least 12px and check text contrast ratio (4.5:1 minimum).
• Use relative units (rem) so text scales with user settings.

Evidence

Figure 4: Zoomed UPTIME and GROWTH cards.

BUG-005: Low-contrast decorative icon and filter pills

Bug ID	BUG-005
Title	Low-contrast decorative icon and filter pill backgrounds
Module / Page	Success Stories page - hero mockup and filter bar
Category	Accessibility / UI
Severity	Low
Priority	P3
Status	New
Reported by	Kavya S M
Date reported	31 Oct 2026

Steps to Reproduce

1. Open the Success Stories page on desktop.
2. Look at the small chart icon in the centre of the mockup grid.
3. Look at the inactive filter pills (SOFTWARE DEV, CLOUD STRATEGY, DIGITAL MARKETING).

Expected Result

Meaningful UI components should have at least 3:1 contrast against their background (WCAG 1.4.11), and the active and inactive states should be clearly distinguishable.

Actual Result

• The chart icon is almost invisible against the pale grid background.
• Inactive pills use a light grey fill on a near-white page, so the button boundaries are faint.

Impact

• Users with low vision may not recognise the pills as clickable controls.
• Combined with BUG-002, the filter bar gives weak visual feedback.

Suggested Fix

• Darken the pill background or add a visible border, and add hover and focus states.
• Increase the icon colour contrast or mark it as decorative if it carries no meaning.

Evidence

Figure 5: Zoomed view of the faint chart icon.

Prioritised Recommendations

Priority	Action	Related
P1 - Immediate	Fix the filter buttons and add an automated UI test for them	BUG-002

Priority	Action	Related
P2 - Next sprint	Add client-side and server-side date validation on all forms	BUG-001
P3 - Planned	Improve text size and contrast for labels, icons and pills; add hover/focus states	BUG-004, BUG-005
P4 - Backlog	Remove stray visual artifacts and add a pre-release visual review	BUG-003

Testing enhancements: automate the key user flows (navigation, filters, forms) with Selenium/Playwright, run Lighthouse and axe accessibility checks in the release pipeline, and keep a cross-browser and responsive test matrix.
